

Anglian Water Renewable Energy Summit

A Water Innovation Network Event

Thursday 9th February, 2012

8.30 am – 3.30pm

Eco Innovation Centre
Peterborough

Anglian Water Renewable Energy Summit

Event Summary

Anglian Water have set the aspirational target of generating around 25% of the energy used by the business* from renewable sources by 2015. Even with current plans for two wind turbine sites and to increase the percentage produced from biogas CHP, there is still a 10% gap in meeting this target.

All of the key Anglian Water managers involved in the renewable energy strategy and procurement will be devoting a day to talk in detail about the challenges and the opportunities. They want to meet with companies in the renewable energy sector that can work with them to close this 10% gap.

Don't miss this unique opportunity to explore the possibility of providing renewable energy solutions to one of the UK's biggest water companies.

* Anglian Water's current energy demand is around 700 Gwh/yr

What is the Water Innovation Network?

The Water Innovation Network (WIN) is an initiative of the UK Centre of Economic & Environmental Development and Anglian Water. The network aims to drive innovation into the water industry via the supply chain and operates a members' network with events and an online innovation portal for companies to submit innovations to Anglian Water. For more information please go to www.waterinnovation.net or contact Nisa Tariq - Email: n.tariq@ukceed.org
Tel: 01733 311644

Why attend?

- ✓ **Meet senior decision makers responsible for Anglian Water's renewable energy contracts**
- ✓ **Pitch your company and or service (limited to first 20 companies to register)**
- ✓ **Gain a good understanding of a UK water utility company's current renewable energy activities**
- ✓ **Understand more about opportunities & challenges for increasing the percentage of renewable energy**
- ✓ **Gain an insight and contribute to the discussion on Anglian Water's future renewable energy strategy**
- ✓ **Meet and hear about the experience of current suppliers**
- ✓ **Network with other companies in the renewable energy and water supply chain sectors**

Who should attend?

Any company that can help optimise current activity or provide new solutions in the following areas:

- Energy from anaerobic digestion
- Wind
- Solar
- Heat pumps
- Biomass
- Bio-fuels liquids
- District heating
- Gasification

(Anglian Water are also interested in areas outside those mentioned in the above list)

Anglian Water Renewable Energy Summit
